ZOOMMED SIGNS A COMMERCIAL COLLABORATION AGREEMENT WITH ADN MEDICAL

Montreal, February 10, 2006 M. Yves Marmet, President and Chief Executive Officer of **ZoomMed Inc.** (TSX-V: ZMD), is very happy to announce that the corporation signed on February 9, 2006, a commercial collaboration agreement with ADN Medical, which has been offering computer services, to more than 4,500 doctors in Québec for more than 15 years.

This agreement marks an important step in the planned deployment of the electronic "ZRx Prescriber", which is being developed by **ZoomMed**. The agreement aims to integrate their respective software and to collaborate closely on their promotion and marketing.

The innovative "ZRx Prescriber" comprises a portable "Palm" type computer system, equipped with a therapeutic advisor for various drugs and a user friendly interface for their prescription. It will enable doctors, who will have in their possession all the relevant information as to the drug to be prescribed, to write prescriptions and to electronically transmit them in a fast and secure mode to pharmacists, thereby changing the way drugs are prescribed to the benefit of patients, government, doctors, pharmacists, insurers and pharmaceutical companies.

Mr. Marmet declared: "This transaction is a first step in our partnership development strategy to facilitate the marketing of our product. With this agreement, **ZoomMed** will have direct access to the present clients of ADN Medical, that is to say about 4,500 doctors throughout Québec, which will propel the deployment of the "ZRx Prescriber"."

According to Renaud Lefrançois, President of ADN Medical: "we are proud to collaborate with **ZoomMed** in order to offer our clients a new tool that will substantially enhance patient services. This tool represents another step towards an electronic patient file and will ease the doctor's practice."

ADN Medical is a private company which offers computer solutions to doctors, medical clinics and billing agencies. These solutions meet the information management needs related to the medical profession, that is to say both administrative data (appointment systems, billing) and clinical data (patient history, exams, diagnostics, ant treatments).
